Python Tutorial For Beginners
Chapter → 0
The Beginning

* What is Programming?

Just like we use Hindi or English to communicate with each other, we use a programming language like python to communicate with the computer.

Programming is a way to instruct the computer to perform various tasks.

* What is Python?

Python is a very simple and easy language to understand. It's like you are reading a book in English language. The pseudocode is easy to learn and understand by beginners.

* Features of Python

- Easy to understand → less development
- Free and open source
- High level language
- Portable : Tasks can be Perform on any platfo
- Fun to work with.

Modules, Comments & Pip

// Code

```
Print(" Hello, Good Morning To Everyone, I am Malip
                                   Singh ")
```

*** Modules**

A module is a file containing code written by Somebody else (usually) which can be imported and used in our programs.

Example: pip install flask   // Write in terminal to install

or

python -m pip install flask

*** Pip**

Pip is the package (Manager for python) you can use pip to install a module on your system.

*** Types of Modules**

- Built in Modules (Pre installed in Python like os).
- External Modules (need to install using pip such as flask, Pandas etc.)

* Using Python as a Calculator

We can use Python as a calculator by just giving command python inside Powershell. It will open REPL or Read Evaluation print Loop.

```
>>> 6 + 5
11
>> 11 - 9
2
```

* Comments

Comments are used to write something which the programmer does not want to execute. This can be used to mark author name, date, etc.

* Types of comments

- Single line Comment: To write a comment like this just add "#" at the start of the line and it will not execute it.

- Multiline Comments: To write a comment like this we can add "#" at each line or just we can add multiline string (""" """).
